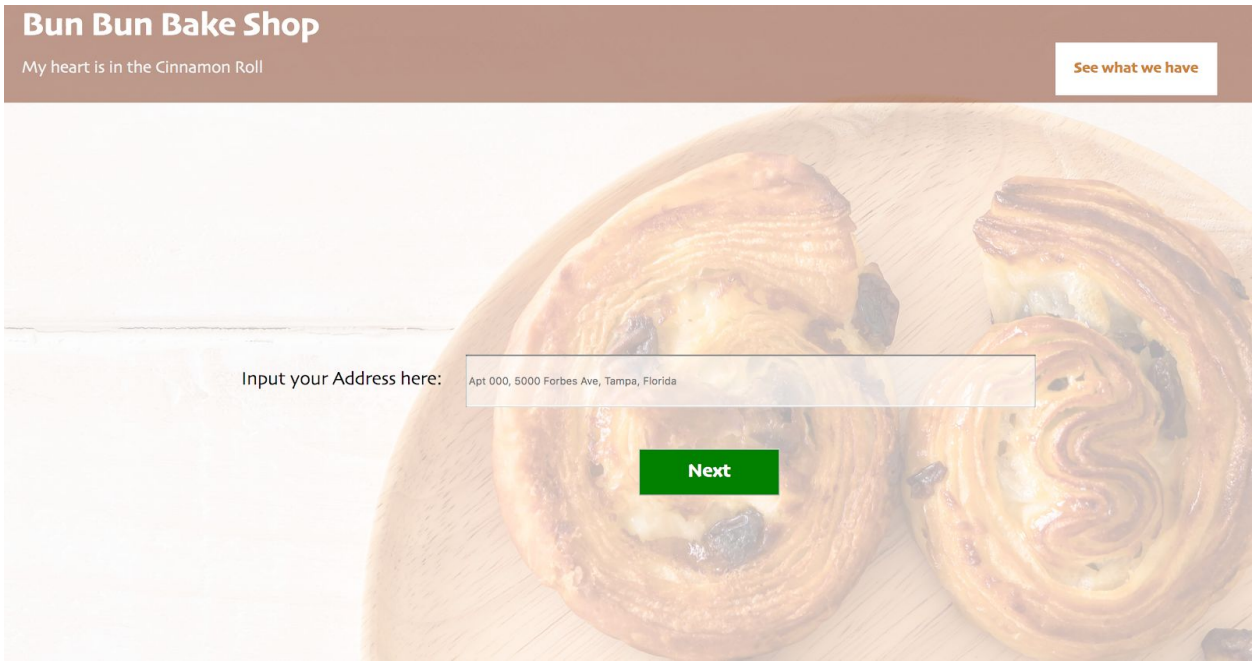
Assignment 6 – Adding Functionality to a Website with JavaScript

You can directly visit my website through:
https://rancuirebecca.github.io/assgn6/landing.html

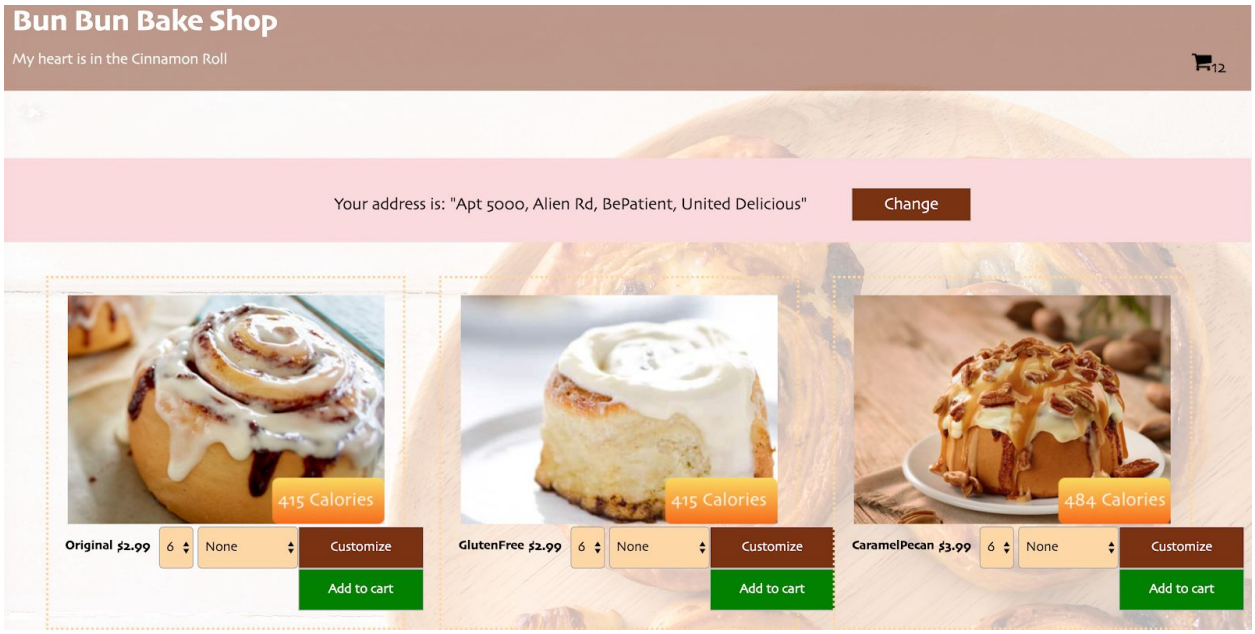
My GitHub repo is:
https://github.com/RanCuiRebecca/RanCuiRebecca.github.io/tree/master/assgn6

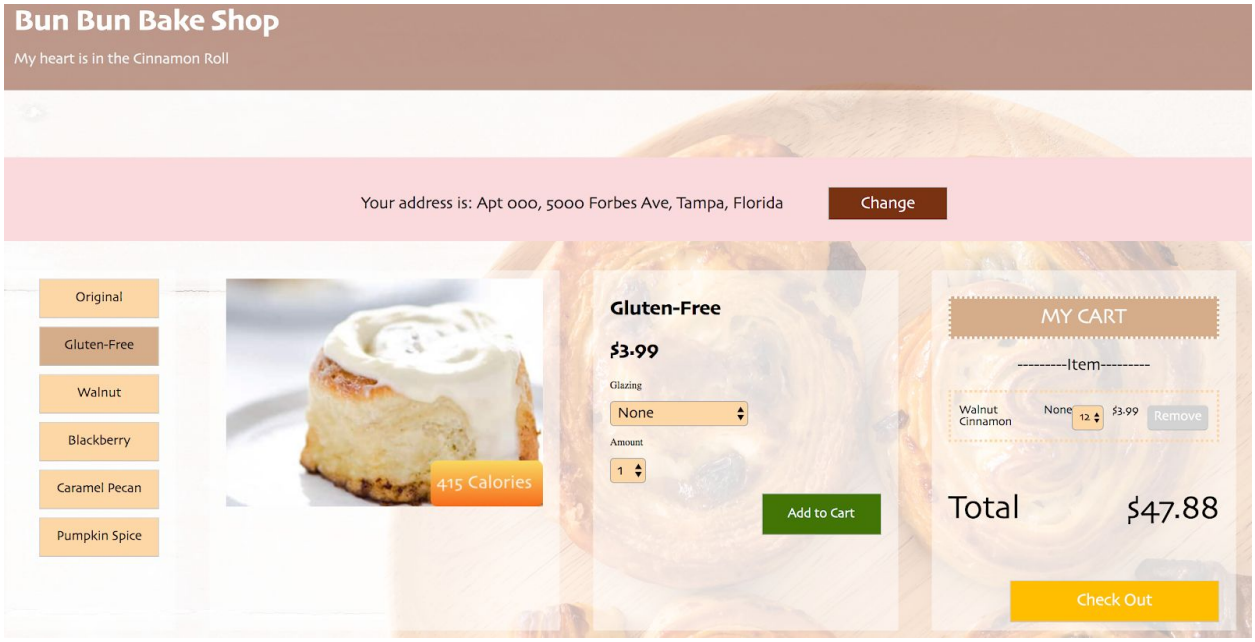
You can read The Low&High-Fidelity Prototypes through:
https://github.com/RanCuiRebecca/RanCuiRebecca.github.io/blob/master/assgn6/Low%26High-Fidelity%20Prototypes.pdf

You may want to first land on this page to input your address, or you can go to browse the products through ”See what we have” button on the up-right corner



Then, you can go to the new “Shopping - cart page” through the cart icon on the up-right corner, You can add what you like through this page, or you can dig into each product and add to cart at that time. When you add items to the cart at this point, you can see the change of the number on beside the cart icon, which will let you see the system status.





I have finished almost all the functions including Local Storage. You can play around with it. The most difficult and interesting part of the design and implementation are the two carts to help the customer to use this website easily. I have already sync them. I will refine the website in the assignment 6B.
